Approved For Release 2009/07/23: CIA-RDP82-00047R000100350008-3 CENTRAL INTELLIGENCE AGENCY **REPORT** INFORMATION REPORT CD NO. COUNTRY Tatar ASSR DATE DISTR. 16 Apr 52 **SUBJECT** Oil Drilling in the Shugurskiy Rayon NO. OF PAGES 2 PLACE ACQUIRED NO. OF ENCLS. (LISTED BELOW) DATE ACQUIRED B SUPPLEMENT TO REPORT NO. 25X1 DATE OF INFO THIS IS UNEVALUATED INFORMATION Description of Oil Field 25X1 2. The oil fields were located in a hilly, sparsely wooded countryside. The nearest railroad station was Klyavlino (5415N - 5201E) about 40 km west of the oil fields. This was a small rayon city with 1,000 houses, situated on the single track railroad line. It is connected with the single track line leading to Kazan Ryazan-Tula. The nearest large city was Uralskiy Borod, about 250 km South-East of the oilfields. 3. In the region six derricks, some 41 25X1 and 28 m high. These derricks were distributed about five km apart. In the same region 25X1

the rotary system. The drill pipes used were six inches and eight inches in diameter. The drills were from 5.75 cm to 25.75 cm in size, the largest size being used for initial surface diffilling. At 1,000 meters depth the drills often broke but always managed to recover them. Wages and Workers With the exception of the director of the oil fields, who was a Russian, all workers and drillers were Tatars. They liked this work because they could earn more money at the oil fields than on the kolkhozes. The oil field laborer earned 500 rubles a month, and a driller was paid 980 rubles a month. From this sum pay two percent for the income tax, and, in addition, 1,000 rubles per year to the government loan. had been told that the loan subscription was voluntary, yet were allotted certain sums according to 382 aries. got a good salary. However, if some of the tools were damaged through the worker's negligence, he had to nay for their repair or cost.		-2	
cher derricks The oil was pumped from the wells through pipes to storage thinks, and from the tanks through large pipes to some other place Production and Operation A. Desst well produced about 50 tons of oil in 28 hours. From oil at a depth of 1200 meters in 28 hours. Drilling speed was, on the average, 90 meters in 28 hours. Drilling was fast for the first 100-200 meters through sand and alsy, but when reached 1,000 m depth, drilling was very slow, about 10 om per eight hours changed drills twice in eight hours. Equipment and Organization 5. The main difficulty Equipment and Organization 6. The main difficulty Equipment and Organization 7. The main difficulty Equipment and Organization 8. The system of first men worked on each shift: the idrillur, driller's assistant, the rigger, motorman and laborer. Each derrick had four tractor Discell motors, which also generated electricity. The Discels were of Russian Uralmachine construction, 300-350 HP each. They worked 1,200 hours without repair. After that, they had to be replaced. Equipment, drill pipes, drill rods, etc., were transported by new Chtz tractors Chelabinshiy Traktornly Zavady, and by Zis three-ton trucks. No trucks could be used in winter time because of the dirt roads. 7. The systems of drilling were used: the turpline system and the rotary system. The drills were from \$15 on to 25.75 on in size, the largest size being used for initial surface drilling. At 1,000 meters' depth the drills of the broke and the rotary system.
